## DETAILED ACTION

### *Allowable Subject Matter*

Claims 44, 48-50 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: none of the prior art of record discloses the claimed liquid alloy of the metals claimed or the use of naphthalene in the cathode as claimed.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 41-42 are rejected under 35 U.S.C. 102(b) as being anticipated by Kaun, U.S. Patent 4,158,720.

Kaun discloses the claimed cathode comprising a liquid alkali metal (see col. 5, line 36-65).

Therefore, the claims are anticipated.

Claims 41-43, 45-47 are rejected under 35 U.S.C. 102(b) as being anticipated by Ziegler et al. (Ziegler), U.S. Patent 3,234,113.

Ziegler discloses the claimed cathode comprising the claimed cathode comprising a liquid alkali metal, such as sodium and using an organic solvent comprising a ether (see claims 1-14).

The specification teaches that the liquid electrode is formed by the liquid metal depositing on the porous metal frame (see page 6, lines 14-20). Accordingly, the claims are anticipated.
